

MIF Filter for Adobe InDesign

MIF Filter plug-in is the right choice for migration from Adobe FrameMaker. To find out why, take a look at the following 5 reasons why to use MIF Filter for importing FrameMaker documents in InDesign:

1

High fidelity conversion

MIF Filter precision is beyond the capabilities of average designer. It would take hours of work, before the redesign result would match the conversion and such redesign has to be made by an operator experienced with both applications. MIF Filter also allows to import cross-references and more supporting InDesign plug-ins for FrameMaker specific features will follow.

2

Different migration strategies for your business case

MIF Filter can be like the best designer, experienced with both InDesign and FrameMaker, who is always around in your office, but is only paid when there's work for him - pay as you go strategy for better cost control of your migration. The same plug-in can replace hundreds of designers rushing to migrate your entire document base. What was a task for months can be done within hours.

3

Seconds instead of days

Even the most complicated of FrameMaker documents are converted within a few seconds. Redesign of such documents would take days. Estimates of the re-design work are hard to make and even harder to fulfill. Redesign usually means outsourcing, risking of confidential data, endless planning and difficult QC. MIF Filter process is faster, cheaper and safer - your data will never have to leave your company.

4

Cents instead of Dollars

Using MIF Filter means having a complete control of migration costs which will never exceed a few cents per page. Manual re-design of the documents you will not only pay \$20 per hour * of designers work. Even the easiest layout can not be redesigned for less than the price of MIF Filter conversion. With the coupons starting as low as \$ 45 you can have virtually instant return on your investment.

5

Software improvement instead of disclaimers

Conversion filters between two layout applications usually have a disclaimer - "some manual adjustment needed after conversion". We know your time is too valuable to spend on fixing minor errors in the documents. Send us the concerned document and we will start improvement work right away.

my pros and cons:

5 REASONS

*Graphic designer average hourly wage was \$21.19 in 2001, according to Occupational Employment Survey of Employers by EDD/LMID.
