Wordcount you can count on

Text Count provides quick and easy control over word counts, overflows and thanks to its unrivaled estimate function, you can control even the text which was not submitted yet.

This QuarkXPress XTensions works as a palette showing the designer real time count and estimate results. To store this information it creates comprehensive report document which is ready to pass on to finance department for freelance payments.

Forget about dummy text and copy pasting to text processors to get your estimates and word counts done. Text Count performs real time counts displaying up to date results in every second of production. It also estimates text elements in empty text boxes to help you adjust size of frames according to desired word count and style.

7 days try–out version is available for download.

Key features

Text Count, counts and estimates text elements and calculates price.

Count features:
Counts characters with and without spaces, words, manuscript lines and manuscript pages. Counts overflow text too.
Counts in selection, paragraphs, text boxes, stories, page, and the whole document.

Estimate features:
