Layer Groups 1.0

plug-in info sheet

Get organized

Another great Photoshop feature you've missed in InDesign. Now you can use the layers in InDesign freely without the risk of getting lost in them. It's time to get organized, it's time to get Layer Groups.

Non-printing setting is not anymore just on object level in InDesign. With Layer Groups plug-in you can set the non-printing attribute to entire layer the way you are used to in other applications.

Download the free 14 days try-out version available at www.dtptools.com/layergroups and raise your productivity to a higher level.

Key features

Layer Groups plug-in creates a new palette of the same name. In this palette you can use following features:

- *Create a group*

Push button in the bottom of the palette.

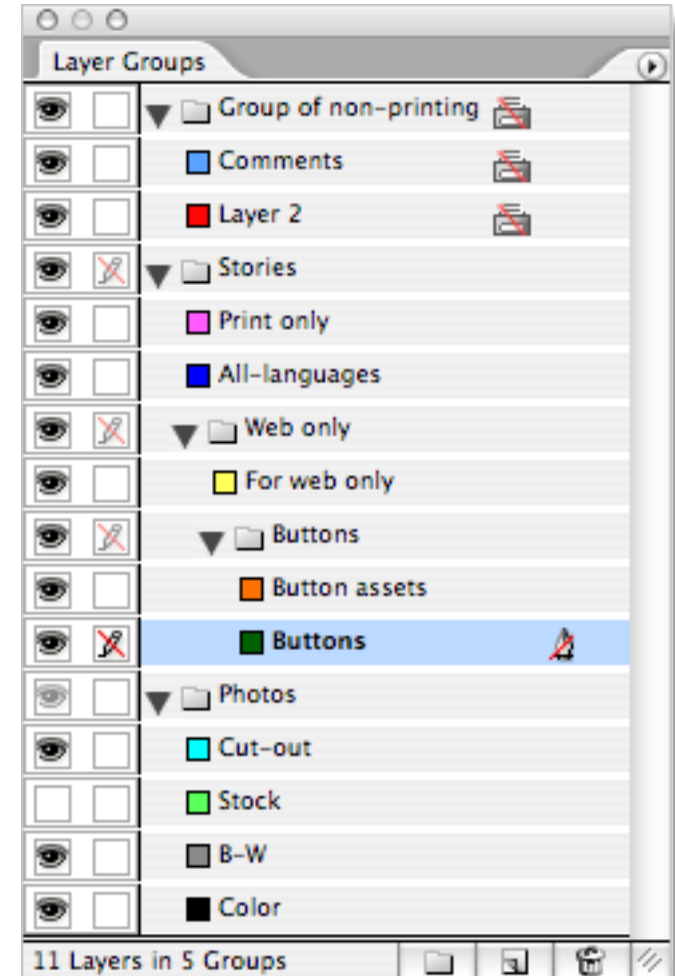

Group is marked by the following sign in the layers list:

- *Make entire layer or group non-printing*

Select desired layer and go to "**Layer Options**" dialog in the Layer Groups palette menu. Check "**Ignore This Layer While Printing**" option.

Layer, content of which will not print, is marked by this sign:

Layer Groups work with InDesign CS and CS2 on both, Mac OS X and Windows. 14-days try-out version download is available at www.dtptools.com/layergroups You can also download using the buttons under this text.
