

FrameMaker import and export filter for QuarkXPress

MIF Filter is currently the only way to exchange documents between QuarkXPress and Adobe FrameMaker.

With MIF Filter installed, QuarkXPress opens FrameMaker documents the same way as its own documents. MIF Filter also enables export from QuarkXPress to FrameMaker. All elements (large tables, page layout, graphic objects, styles colors, etc.) are converted.

MIF Filter was created as a professional tool with the convenience of its users in mind. It's easy to install, easy to buy and easy to use. You can use your FrameMaker documents with the added advantage of QuarkXPress environment. With MIF Filter you will never have to do the same work twice.

Due to differences between QuarkXPress and FrameMaker, some manual adjusting might be needed after conversion.

Key features

Import

- ⇒ page layout, master pages, body pages
- ⇒ graphic objects
- ⇒ tables
- ⇒ anchored frames
